FREE VISUAL GUIDE

NO CODING · WINDOWS LAPTOP

Build Your *Own JARVIS* Assistant

A voice assistant with an Iron Man screen. Talk in **English, Tamil or Tanglish** and it checks your laptop, reads the news and weather, opens apps, switches Wi-Fi, and even **builds websites in Claude** while you watch.

Voice + Tamil

Claude brain

PC control

Builds projects

THE RESULT

An assistant that *does things*

Say “Hey Jarvis”, ask in your own words, and JARVIS answers out loud and shows the result on screen.

Your laptop

Battery, charger, RAM, CPU, storage and Wi-Fi status.

Live info

AI updates, today's news, sports scores and weather for where you are.

Tamil & Tanglish

Ask in English, Tamil or Tanglish. JARVIS replies in English.

Folders & apps

Opens any folder or installed app: Claude, Antigravity, VS Code.

Wi-Fi on / off

Switches Wi-Fi, and turns it back on even when you're offline.

Builds projects

Opens the Claude app, types your idea and builds it live on screen.

Asked “ennoda laptop battery, charger, RAM sollu”: JARVIS speaks the answer and shows a System Status panel.

HOW IT WORKS

Your voice. *Claude's brain.*

JARVIS has two halves that run on your laptop. The only paid account you need is Claude.

You
Speak or type a request

→

The face
JARVIS screen in Chrome: hears you and speaks

→

The bridge
A small program on your laptop

→

Claude
Thinks and picks the right tool

→

Your laptop
Wi-Fi, folders, apps, web

Three things to remember

1. **Runs on your laptop**
   GitHub only stores the code. You download it and start it on your own computer.

2. **Uses your Claude login**
   No API key. Usage counts against **your** Claude plan, like a normal chat.

3. **Needs a real browser**
   Open it in **Chrome or Edge**. Preview panes inside apps block the microphone.

Safe by default

JARVIS can **look at anything** and do the everyday actions in this guide (open folders and apps, Wi-Fi, build projects). Risky actions like deleting files or sending messages stay **switched off** unless you turn them on yourself.

YOUR ROADMAP

5 parts, *one coffee break*

Each part has its own pages. The tracker in the top-right corner shows where you are.

1	**Prepare** Check your laptop and make sure you have a Claude plan.	CHECKLIST	5 min
2	**Get the code** Download JARVIS from GitHub and unzip it.	GITHUB	2 min
3	**Install** Install Node.js and log in to Claude Code, once.	TERMINAL	10 min
4	**Run** Double-click Start JARVIS.bat. It opens in Chrome by itself.	DOUBLE-CLICK	3 min
5	**Talk** Say “Hey Jarvis” and try the commands. Then fix anything odd.	YOUR VOICE	∞

Your JARVIS folder after unzipping

Downloads\jarvis--main

```
jarvis--main\
└ jarvis--main\          ← open this inner one
   ├ Start JARVIS.bat     ← double-click
   ├ bridge\              the brain
   ├ src\                 the screen
   ├ scripts\
   ├ package.json
   └ README.md
```

Folder inside a folder. Windows' “Extract All” makes `jarvis--main` inside `jarvis--main`. Open both. `Start JARVIS.bat` is in the inner one.

PART 01

PREPARE 5 MIN

Prepare: what you need

Gather these before you start. Everything except the Claude plan is free.

Windows 10 or 11 laptop

Wi-Fi, folders, apps and the Claude-app build use Windows features. Chat, news and weather work anywhere.

Claude plan (Pro or Max)

JARVIS's brain runs on your Claude login at **claude.com**.*

Node.js 20 or newer

Free, from **nodejs.org**. Choose the LTS installer.

Claude Code

Free to install. JARVIS reuses its login, so no API key is needed.

Chrome or Edge

The JARVIS screen and microphone run here.

Mic + headphones

Headphones stop JARVIS hearing its own voice.

Optional: Claude desktop app

Only for “open Claude and build a project”. From **claude.com/download**.

Optional: Git

Only if you prefer `git clone` to the ZIP download.

Plans, prices and app menus change often. Check Anthropic's current pages before you start.

✓ Ready to go?

- [ ] My laptop runs Windows 10 or 11
- [ ] I can log in at claude.ai
- [ ] Chrome or Edge is installed
- [ ] My microphone works

PART 02

GITHUB 2 MIN

Get the code

Everything is in one free GitHub repository. Pick one way to download it.

THE JARVIS REPOSITORY

github.com/*MAbitha1/jarvis-*

Scan the code or type the address. This version has every feature shown in the video.

Option A · ZIP download

EASIEST

1. On the GitHub page, click the green **Code** button.
2. Click **Download ZIP**. It saves `jarvis--main.zip` to Downloads.
3. Right-click the ZIP and choose **Extract All**, then **Extract**.
4. Open `jarvis--main`, then the **inner** `jarvis--main`.

Option B · Git

FOR DEVELOPERS

Open PowerShell where you want the folder and run:

POWERSHELL

```
git clone https://github.com/
  MAbitha1/jarvis-.git jarvis
cd jarvis
```

Your folder is then simply called `jarvis`.

Don't run it from inside the ZIP. Double-clicking files inside a ZIP without extracting gives a copy with missing pieces. Always **Extract All** first.

PART 03

INSTALL 10 MIN

Install, once

Two installs and one login. You never repeat this part.

1 Install Node.js

Go to **nodejs.org**, download the **LTS** installer and click Next through it. Then open a **new** PowerShell window and check:

POWERSHELL — should print v20 or higher

```
node --version
```

2 Install Claude Code

In the same PowerShell window, run:

POWERSHELL

```
npm install -g @anthropic-ai/claude-code
```

3 Log in to Claude, once

Type `claude` and press Enter. A browser page opens: log in with your Claude account. Back in PowerShell, type `/exit`. JARVIS now uses this login.

POWERSHELL

```
claude
# log in in the browser, then:
/exit
```

4 JARVIS's own packages: automatic

Nothing to do. The first time you double-click **Start JARVIS.bat** (Part 4), it downloads what it needs. That takes a few minutes, once.

Optional: free keys for extras

SERPER_API_KEY

From **serper.dev**. Faster news and search results.

ELEVENLABS_API_KEY

From **elevenlabs.io**. A better voice. The key starts with `sk_`.

JARVIS works fully without keys. Never show your keys in a video or share them.

PART 04

DOUBLE-CLICK 3 MIN

Start JARVIS

One double-click starts the brain and the screen, then opens JARVIS in Chrome.

1 Double-click Start JARVIS.bat

In the inner `jarvis--main` folder.

2 Click Run if Windows asks

"Do you want to run this file?" appears for downloaded files. Click **Run**.

3 Wait for Chrome

A black window opens. First time: a few minutes of installing. Then JARVIS opens in Chrome.

4 Click INITIALISE

In the middle of the JARVIS screen.

5 Allow the microphone

Click **Allow** when Chrome asks.

6 Say "Hey Jarvis"

Wait for it to light up, then ask your question.

JARVIS starting up in Chrome. Keep the black window open while you use it.

Handy keys on the JARVIS screen

`Space`	Talk without the wake word
`C`	Type instead of speaking
`S`	Settings (language, voice)
`Q`	Mute the microphone

To stop JARVIS, close the black window. **Next time**, just double-click Start JARVIS.bat again: no installing, it opens in seconds.

PART 05

YOUR VOICE EN · தமிழ் · TANGLISH

Talk to JARVIS

Start with “Hey Jarvis”, then ask the way you'd ask a friend. JARVIS answers in English.

LAPTOP STATUS

“Ennoda laptop charger, RAM, battery ellam sollu”

AI NEWS

“Today AI updates enna?”

WEATHER

“Inniku weather eppadi irukku?”

NEWS & SPORTS

“Today cricket score enna?”

OPEN A FOLDER

“Downloads folder open pannu”

WI-FI

“Wi-Fi off pannu” · “Wi-Fi on pannu”

OPEN AN APP

“Antigravity open pannu”

TASKS

“Add a task: call the client at 5”

Speaking in Tamil

S

Press S

Opens Settings

Recognition language

Pick **Tamil (India)**

Press S again

Closes Settings

Tanglish tip: for Tamil words written in English letters, **English (India)** usually understands you better than Tamil (India).

PART 5 · THE SHOWSTOPPER

Build a website *by voice*

Ask JARVIS to build something in Claude, and you watch it happen live: no typing, no clicking.

SAY

"Hey Jarvis, Claude open panni Diwali products UI website panni thaa"

What happens next

Opens Claude
The Claude desktop app comes to the front

→

New chat
Starts a fresh conversation

→

Types & sends
Writes a full website request and presses Enter

→

Claude builds
The finished site appears in Claude's side panel

For it to work

Claude app installed
The desktop app from **claude.com/download**, logged in.

Hands off for 5 sec
Don't touch the keyboard or mouse while JARVIS types.

"Claude", not "cloud"
JARVIS knows "cloud" and "cloth" usually mean Claude.

Or let JARVIS build it in the background

Say **"Build me a to-do list app"** without mentioning Claude. JARVIS builds it quietly, checks the page works, saves it in the `JARVIS Projects` folder in your user folder, and opens it when it's done (a few minutes). Ask **"project status?"** any time.

SOMETHING NOT RIGHT?

Quick *fixes*

Find what you see, then do what the box says.

Double-click shows another folder

That's the folder-inside-a-folder. Open the inner `jarvis--main` and double-click **Start JARVIS.bat** there.

"Opened from inside the ZIP"

Right-click the ZIP, choose **Extract All**, and run the .bat from the extracted folder.

"Node.js is not installed"

Install the LTS version from nodejs.org (it opens for you), then double-click again.

"JARVIS is already running"

Another JARVIS window is open. Use that one, or close it and start again.

Screen loads but never hears you

Use a normal Chrome window. Click the icon left of the address bar and set **Microphone** → **Allow**, then reload.

"Not logged in" or no answers

Run `claude` in PowerShell, finish the login, then restart JARVIS.

Says "usage limit" or "weekly limit"

Your Claude plan's limit is used up. Wait for it to reset, or upgrade the plan.

Cuts itself off mid-answer

It's hearing its own voice. Use headphones or turn the speaker down.

Claude app opens, nothing typed

Install and log in to the Claude desktop app, and don't click anywhere while JARVIS types.

Wi-Fi, folders or apps don't work

These need Windows 10 or 11. On Mac or Linux, chat, news and weather still work.

HELP

FAQ & *glossary*

Do I need to know coding?

No. You download, double-click and talk. The only typing is three commands in Part 3.

Is it free?

The code, Node.js and Claude Code are free. JARVIS uses your **Claude plan**, like a normal chat.

Do I need an API key?

No. It uses your Claude Code login. The ElevenLabs and Serper keys are optional extras.

Can JARVIS delete my files?

Not by default. Risky actions stay off unless you deliberately switch them on.

Why can't I open it from GitHub?

GitHub only stores the code. JARVIS has to run on your laptop, so download it first.

Does it work on Mac?

Chat, news and weather do, with `npm start`. Laptop control and the .bat file are Windows-only.

Plain-English glossary

Repository (repo)
The project's folder of code on GitHub.

Claude Code
Anthropic's tool that gives JARVIS its brain, using your Claude login.

.bat file
A Windows file you double-click to run a list of steps.

Wake word
“Hey Jarvis”, the phrase that makes it start listening.

Node.js
The free program that runs JARVIS on your laptop.

Bridge
The part of JARVIS that connects the screen to Claude and your laptop.

localhost:5173
The address of JARVIS on your own laptop. Only you can open it.

Terminal / PowerShell
The window where you type commands.

Claude and Claude Code are products of Anthropic. This is an independent guide; app menus and plans may change.

Now build *yours.*

One download, one double-click, one “Hey Jarvis”. Show me your JARVIS in the comments. I'd love to see what you make it do.
